

ACTIVE ASSAILANT

WHY WE ADDRESS ACTIVE ASSAILANT INCIDENTS?

- Common incident type
- Active Assailant: using weapon to inflict harm on others (gun, knife, vehicle)
 - Targeted (including politically motivated)
 - Opportunistic
 - Heightened emotions (roadways, bars, stadiums)

WHAT TO DO?

- Have a plan
- Exits and alternatives
- Run, Hide, Fight
 - Leave your belongings
 - Keep your hands visible

WHAT TO KNOW ABOUT YOURSELF?

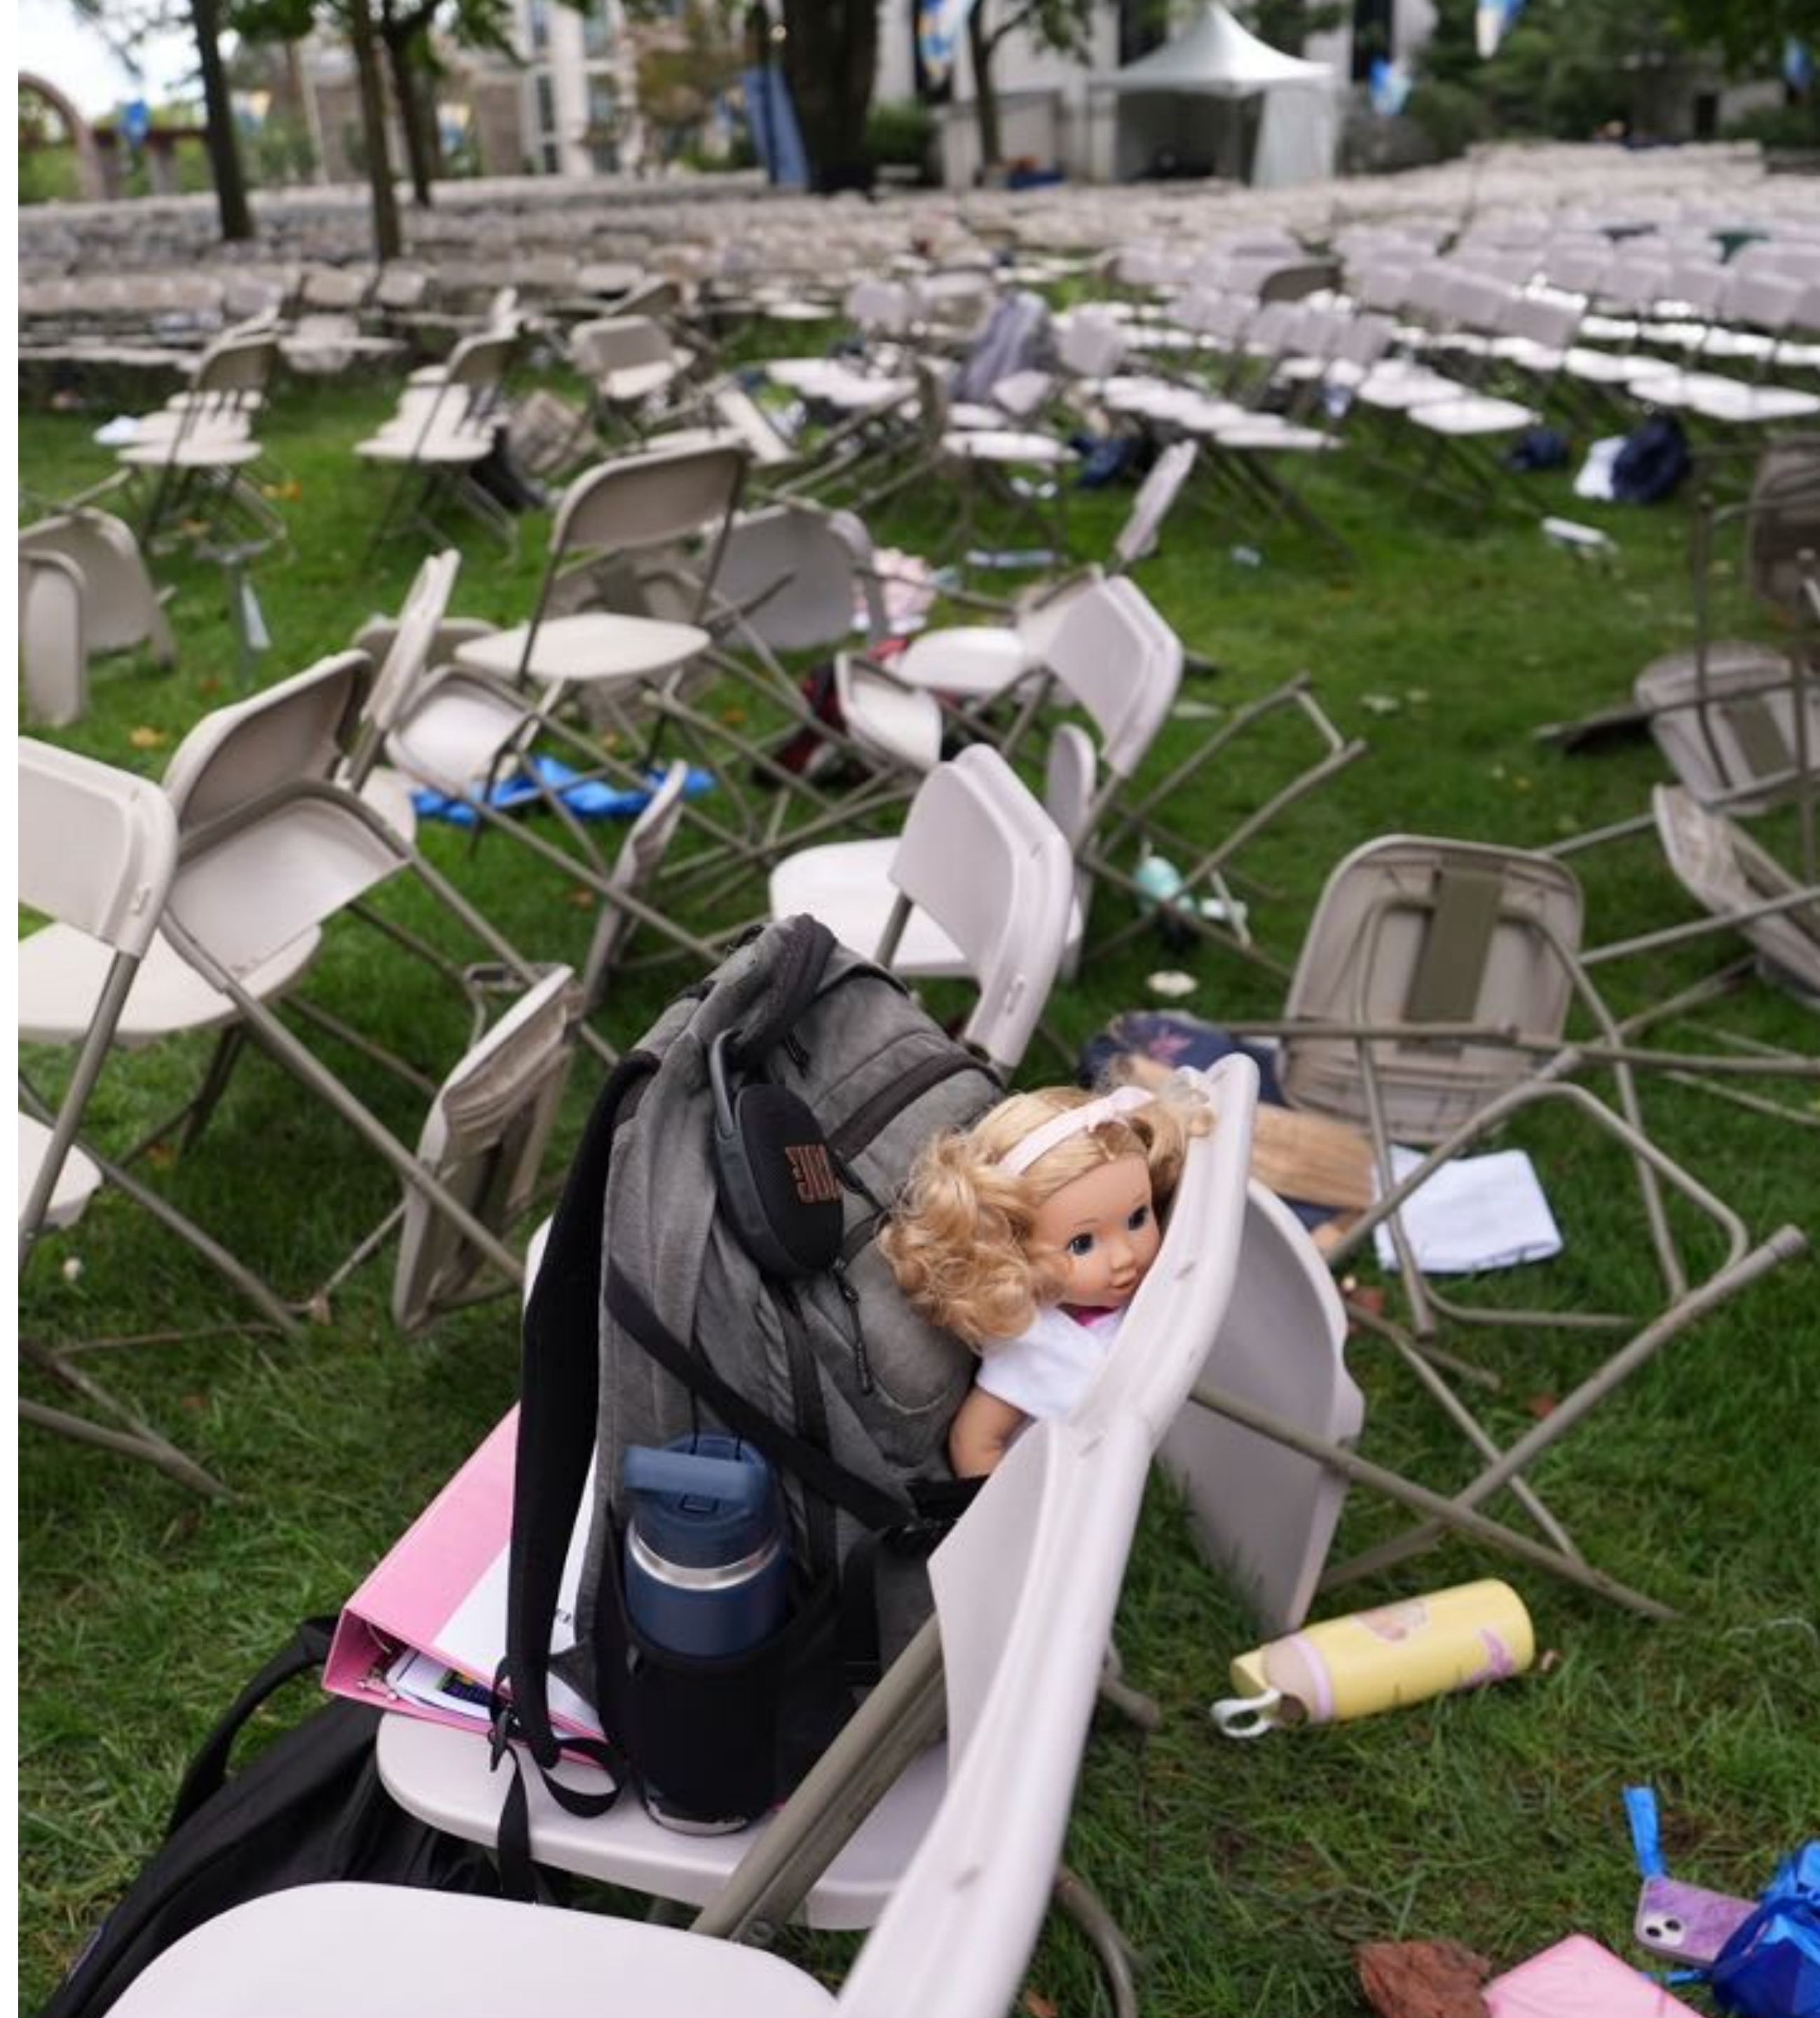

Review how you respond to threats to your personal safety:

- Freeze
- Flight
- Fight
- Fawn
- "Hacking" your response

RUN

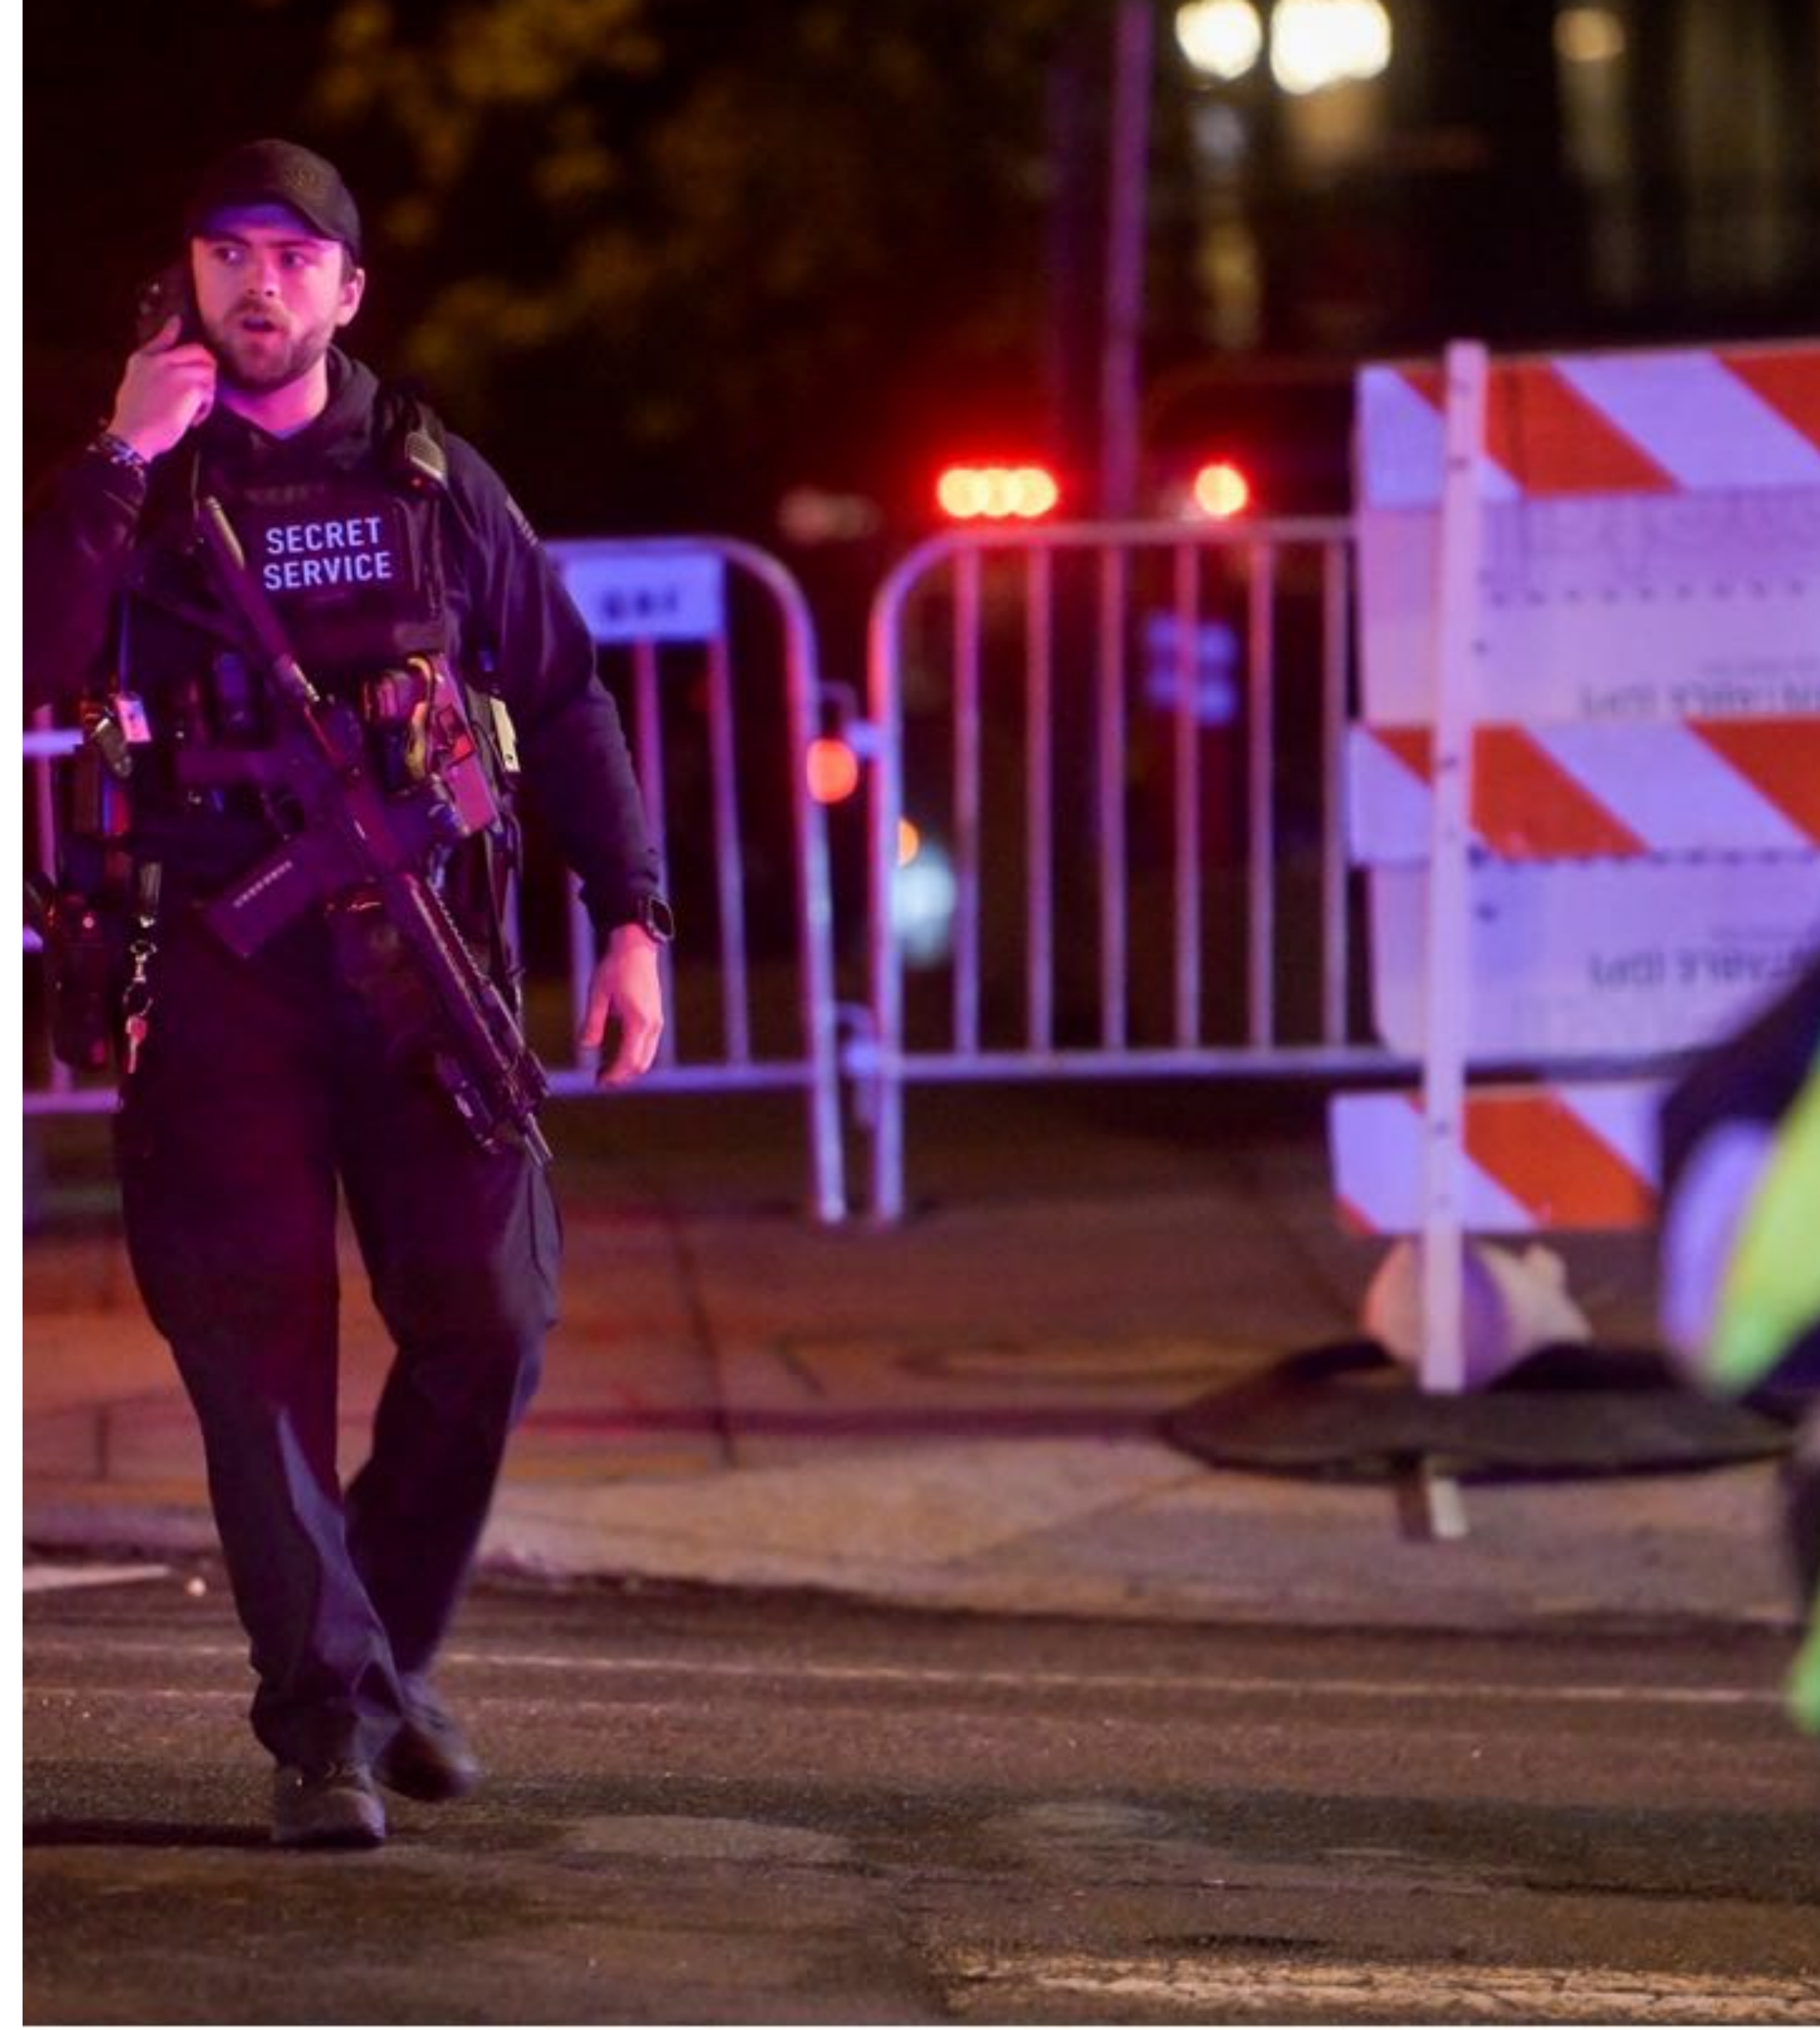

- Get as far away as you can, as fast as you can
- Avoid running in a straight line
- Run away from the shooter
- Encourage others to run, but don't delay your exit

RUN

Next:

- Call emergency services and provide as many details as you can
- Report to any desk or 'overwatch' you may have

HIDE

If you cannot safely leave the area, hide:

- Close, lock, and barricade doors
- Turn off lights, silence phones, stay quiet
- Look for cover when you are hiding, or make yourself small and outside the likely line of fire
- If you can call emergency services, do so

HIDE

- The goal is to make your location harder to access to deter the assailant
- Once hidden, prepare to fight as needed

FIGHT

- If you cannot run or hide, prepare to fight
- This is your last resort, but may make the difference in surviving
- Use anything as an improvised weapon
- Come up with a plan focusing on the assailant's legs, arms, and head, or controlling the barrel of the weapon

TREATING INJURIES

Do not place yourself in danger to provide treatment to someone else:

- Provide treatment within your training level
- Know where equipment is located
- Contact management if you're missing equipment in offices

TREATING INJURIES

- Know what is in your IFAK, or if you need one
- Make sure you have first aid or at least "stop the bleed" training
- Review the first aid modules, which cover treating catastrophic bleeding

CONTEXT

- Context matters, understand how active assailants engage where you live
- If discreet, individual attacks are common use Run, Hide, Fight
- If more complex attacks are common refer instead to Ballistic Awareness and Small Arms modules, and the guidance presented there
- If you have circumstances requiring modification, reach out to and specialist safety advisor you have available

METAL HEALTH SUPPORT

Resources:

- Employee Assistance Program (EAP)
- One-off "check-ins"
- Peer Support Networks

METAL HEALTH SUPPORT

Figuring out what works best for you:

- An hour off each day
- A longer block time off
- Something else?
- Processing might not be immediate
