

SALES BRIEFING

WebXR safety training that journalists, NGO staff, and field teams can open in a browser — on a laptop today, in a headset when it matters.

SILKROAD TRAINING · WEBXR

TRAINING SCENARIO
Urban Conflict

OBJECTIVE
Move to extraction point safely.

THREATS

- Unstable structures
- Civilian presence
- Improvised explosive devices (IEDs)

EXTRACTION POINT

215m

SCENARIO BRIEF

- Assess area
- Avoid threats
- Move to extraction point
- Check in

STATUS
Ready

PRESS

CONFLICT ZONES

Classroom training arrives too late — and costs too much to repeat.

01

Access too late

Teams deploy before they can reach a classroom. The rehearsal they needed never happens.

02

Fly-in cost

Sending people to a facility burns budget, time, and operational capacity.

03

No easy refresh

Skills fade. There is no lightweight way to reset them before the next tasking.

Spatial computing makes high-impact training possible anywhere.

XR

Extended Reality

The umbrella for blending digital and physical worlds.

VR

Virtual Reality

Full immersion in a simulated environment.

AR

Augmented Reality

Digital layers added onto the real world.

MR

Mixed Reality

Virtual objects placed in real space, handled naturally.

Faster
completion

Stronger
retention

More confident
performance

Headsets are more affordable. Simulations are more capable. The moment to train safer, faster, and at scale is now.

One link. Any device. Instantly current.

WebXR runs VR and AR in the browser. No app store. No IT install. Click, and the same module opens on a Quest, a Vision Pro, a phone, or a laptop.

Skip the install

Open on a desktop browser in seconds. If a headset is available, the same module becomes fully immersive.

Update once

Change one page and every device is current. Progress stays tracked across sessions.

Go wide, not just deep

Native apps go deeper. WebXR reaches everyone — including people who will never wear a headset.

Same standard

Field staff, local hires, and office managers complete the same training, on the device they have.

More than a presentation. A library you can rehearse in.

Training opens in a virtual conference room, then branches through interactive portals. Learners make decisions in context and can revisit them before the next task.

- Curated lessons
- Real-world case studies
- Interactive 3D models
- Infographics and video
- Immersive 360° scenarios

PORTALS

From the conference room

- 01 First aid in hostile settings
- 02 Navigating conflict zones
- 03 Disaster response
- 04 Safe vehicle travel
- 05 Civil unrest
- 06 Digital and building security

Laptop: a live briefing you can use.
Headset: virtual presence under pressure.

TRY THE DEMO

See it. Feel it. Own it.

Immersive, interactive safety training without specialised facilities. Practice realistic hazards in a controlled environment. Scale it across locations. Update it in one place.

ACCESS

Browser-based. Works where your people already are.

CONSISTENCY

The same standard for field teams and office managers.

INSIGHT

Progress tracked. Performance visible.

LOWER DISRUPTION

No flights. No classroom lock-in. Refresh before the next task.
